DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 16 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Tso(US 6,157,270).

The reference by Tso discloses an oscillator circuit, see figure 2, comprising a variable current source(based on temp) for supplying a reference current(IBG) that is dependent on temperature(due to band gap circuit)see col. Lines 50-60. The current is mirrored to resistive elements(R1,2), where R1 produces a reference voltage R1. R1 is not a temp dependent resistor. Switch 206 is coupled between the mirror transistors and the relaxation osc(100) which inherently has a capacitor. The relaxation oscillator charges and discharges current through the capacitive circuit to provide an oscillating signal FRQ_OUT that is independent of temp and voltage variations (see col. 5, last para.)

Allowable Subject Matter

3. Claims 2-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
